commissioned being storeable on said article shafts, each of said article shafts having a stopping and dispensing article device at one of its longitudinal ends that is a lower end and can be filled with new articles at its other, higher longitudinal end on a bay filling side;

an article bay;

a traveling bay-storage and retrieval unit associated with said article bay, said traveling bay-storage and retrieval unit having an article-handling device that is movable in space with a stack-of-articles support which can be positioned in an essentially vertical position with a correspondingly vertical stack of articles picked up in the support at each higher longitudinal end of said article shaft on said bay filling side, said stack-of-articles support having a lower individual article ejector, which is displaceable in the transverse direction of the stack and is, said individual article ejector for pushing a lowermost article of said stack of articles of said support into a selected one of said article shafts or having a stack-of-articles holding-up device for pushing up and by which a topmost article of a pushed-up, obliquely positioned stack of articles reaches a selected article shaft under the force of gravity or by said upper individual article ejector, said upper individual article ejector being displaceable in a transverse direction of the stack.

35. A commissioning unit in accordance with claim 34, wherein said stack-of-articles support with said lower individual article ejector has a vertically adjustable guide for a lower individual article to be pushed out.
